

March 10, 2023

Dear Villagers, Team members, Family members and Friends;

In the past 48 hours we received notification that two (2) of our Staff have tested positive for COVID-19. These individuals are recovering at home; we wish our coworkers well. We have determined that contact trace testing must be completed per CDC guidelines.

Public Health has been updated. We will continue with testing team members and villagers, as needed, per CDC guidelines. As previously shared, testing methodology is now based on contact tracing versus surveillance testing. As always, you will be notified if there are any new identified cases of COVID-19 in team members or villagers.

We are now considered to be in outbreak status. CDC guidelines will continue to be followed in determination of further testing. We continue to require masks at this time due to a community transmission rate of high and our outbreak status. Ongoing consideration will be given to the status of wearing masks for staff, volunteers and visitors. We continue to encourage all visitors to follow guidelines of safe practice during their visit.

Per CMS requirements, we will continue to notify you in the event that new COVID-19 cases are identified at Brewster Village. Brewster Village team members remain diligent in infection control measures, including utilizing universal source control (masks), additional personal protective equipment when necessary, enhanced cleaning, and maintaining a high level of diligence for monitoring for signs and symptoms of COVID-19. I continue to applaud their efforts in keeping the villagers and themselves safe.

Sincerely,

*Jennifer Hoelzel Bouhram RN, WCC*
