

June 9, 2023

Dear Villagers, Team members, Family members and Friends;

In the past 48 hours we received notification that an additional six (6) Villagers have tested positive for COVID-19. We are monitoring the Villagers carefully. We wish them the best in their recovery. These positive cases were identified through testing we completed due to respiratory symptoms. We have determined that contact trace testing will continue per CDC guidelines for the Villagers and staff that had contact with these individuals.

Public Health has been updated. They have reviewed our case load and the measures we have in place to mitigate risks. They had no concerns with our current measures.

We will continue with testing team members and villagers, as needed, per CDC guidelines. As previously shared, testing methodology is now based on contact tracing versus surveillance testing. As always, you will be notified if there are any new identified cases of COVID-19 in team members or villagers.

We continue to be in outbreak status. CDC guidelines will continue to be followed in determination of further testing. We are requiring masks for all staff working or traveling to Atrium 2 at this time due to our outbreak status. Ongoing consideration will be given to the status of wearing masks for staff, volunteers, and visitors. We continue to encourage all visitors to follow guidelines of safe practice during their visit.

Brewster Village team members remain diligent in infection control measures and for monitoring for the signs and symptoms of COVID-19. I continue to applaud their efforts in keeping the villagers and themselves safe.

Sincerely,

*Jennifer Hoelzel Bouhran RN, WCC*
