

October 27, 2023,

Dear Villagers, Team members, Family members and Friends;

Over the course of this past week we have identified seven (7) additional staff members who have tested positive for COVID-19. They are recuperating at home and we wish them well. We have also identified two (2) additional Villagers that have tested positive for COVID-19. The Villagers are recovering as expected in their households. These positive cases were identified through a combination of contact trace testing and presenting symptoms. Contact trace testing has been completed and we are no following symptom testing. We will complete contact trace testing as needed.

Public Health has been updated. They have reviewed our case load and the measures we have in place to mitigate risks. They will alert us if they feel we need further steps to mitigate risks.

These positive cases do not affect current visitation practices. If visitors wish to wear a mask when visiting they will be available at the front desk. We continue to encourage all visitors to follow guidelines of safe practice during their visit.

We are still considered to be in outbreak status. Outbreak status is measured as one (1) or more confirmed cases of COVID-19 (among staff or Villagers). We will continue with testing team members and villagers, as needed, per CDC guidelines. As previously shared, testing methodology is now based on contact tracing versus surveillance testing. As always, you will be notified if there are any new identified cases of COVID-19 that affect care to you/your Villagers. A letter will be sent weekly while we are considered in outbreak (if affecting villagers).

Brewster Village team members remain diligent in infection control measures and for monitoring for the signs and symptoms of COVID-19. I continue to applaud their efforts in keeping the villagers and themselves safe.

Sincerely,

*Jennifer Hoelzel Bouhram RN, WCC*
